1. Overview of Rolaram® Linear Actuator Range

What is a Rolaram® Linear Actuator?

Rolaram® is an electro-mechanical linear actuator, which consists of either a Spiracon™ planetary roller screw or a ball screw, driven by an electric motor, through a reduction gearbox. The lead screw converts rotary motion to linear movement. As the screw rotates, the nut extends and retracts the ram, which is attached to the load.

Parallel Configuration

The Spiracon™ Roller Screw

This unique patented system consists of a multi-start screw with an involute thread form and a number of planetary rollers with annular grooves, which engage with the screw. These rollers also engage with a grooved load bearing element, which transmits the load through roller thrust bearings, to the nut housing. The rolling action results in a high efficiency mechanism, while the line contact and hardened and ground construction achieves a high dynamic load carrying capacity, along with almost no axial backlash or wear.

Spiracon Nut

Main features of Rolaram® Actuators

- High efficiency screw mechanism and gearbox
- High dynamic load capacity and wide speed range
- Controllable for synchronisation
- Precise repeatability of positioning
- Long life and low maintenance and running costs
- Clean operation and low noise
- Cost effective package
- Guided ram option

Advantages over other Actuators

Rolaram actuators can not only match the load capacity of hydraulic cylinders and exceed the load capacity of conventional electro-mechanical actuators but also provide:

- Easy installation, no pipework, powerpack and valves
- Easy synchronisation of more than one unit
- Accurate and repeatable positioning using simplified system
- Low power consumption and running costs
- No oil leaks, contamination or fire risk
- Low noise system
- Higher dynamic capacity, higher speed capability and longer life

Applications for Rolaram® Actuators

Rolaram actuators are well proven throughout the world in a wide variety of industries including

Nuclear Food Processing Aerospace Paper

Metal Processing Offshore and Marine Medical Communications Automotive Defence Typical applications include:

Scissor lifts, lifting platforms, robotics, continuous paint pumps, medical beds, coiling/decoiling machines, tundish cars, continuous operation process lines.

Drive Configurations

Right Angle

Parallel

In-Line

2. Working Applications for Rolaram® Actuators

Application

Die splitter for opening up 20 tonne die sets, prior to their use in the production of car body panels.

Linear Actuation Requirements

Dies require to be split evenly, with all corners being moved simultaneously, within 5 microns of each other.

Solution

4 identical Rolaram actuators mounted one on each corner of the die splitter. Each driven by a servo motor, controlled by a PLC, to ensure synchronisation of all 4 actuators, within the required limits of positional accuracy. Cranes were previously used to split the dies and the die splitter now represents a considerable time saving in preparing dies for production.

Application

European Community funded research project, to monitor the steering roll characteristics on a zincplating line for steel strip. The aim is to optimise downtime and repairs on the line.

Linear Actuation Requirements

5 axis control of the steering roll (X, Y, Z and tilt), to a repeatable positional accuracy of less than 10 microns.

Solution

5 Rolaram actuators, each driven by an AC synchronous servo motor, controlled by a Programmable Multi Axis Control System. The units are fitted with an incremental encoder, a load cell and backlash free gimble mounting.

Operating

Moving a maximum load of 270kg at a maximum acceleration of 1 metre/second² and a maximum speed of Characteristics 0.5 metre/second, to a repeatable accuracy of less than 10 microns.

Application

Grinding head adjustment to put precise tapers on camshaft cam lobes.

Linear Actuation Requirements

Moving a load of 270kg, on a continuous duty cycle, over an operating life of 10 years.

Solution

A single Rolaram actuator fitted with an AC servo motor and encoder. Unit is sealed to prevent the ingress of abrasive dust.

Application

De-chocking car for removal and refitting of 14 tonne bearing assemblies (chocks) on steel rolls.

Linear Actuation Requirements

4 stage sequence of operation

- Locate car on its rails, parallel to and exactly on centre line of bearing assembly.
- High speed traverse drive to place lift platform under bearing assembly.
- Raise lift platform to sense load of 14 tonne bearing assembly, then move 75 microns to locate centrally around tapered shaft of steel roll.
- Drive platform traverse to clear bearing assembly from shaft (slow speed) then safely locate bearing assembly on car (high speed). A hydraulic solution was unable to satisfy the above requirements.

Solution

A total of 2 Rolaram actuators and 6 Spiracon roller screws, to provide a combination of high speed (up to 45 metres/minute), very slow speed and micron accuracy. Since the de-chocking car has been installed, the time required to prepare rolls for changing at the mill stands has been reduced by up to 50%.

3. Product Code for Rolaram® Actuators

The product code is of the following form:

(1) Product Code

An 8 digit code obtained from Technical Charts (refer 2.2.6.)

(2) Drive Configuration

R - Right Angle
P - Parallel
H - In-Line

(3) Unguided/guided

P - Unguided Ram
K - Guided Ram

(4) Stroke

A 4 figure code to represent the required stroke in mm.

(5) End Fitting

C - Clevis End
T - Top Plate
S - Screwed End

(6) Mounting

RC - Rear Clevis
TN - Trunnion without Feet
TF - Trunnion with Trunnion Feet
TE - Trunnion with Trunnion Feet and End Cap Foot

(7) Proximity Switches

P - With stroke detecting Proximity Switches
0 - Without stroke detecting Proximity Switches

(8) Encoder

E - With Encoder
0 - Without Encoder

Example Part Number

(1) Model R075 Actuator with linear speed of 600 mm/min

(2) Parallel Drive Configuration

(3) Guided Ram

(4) Stroke of 400 mm

(5) Screwed End Fitting

(6) Trunnion Mounting with Trunnion Feet and End Cap Foot

(7) With Proximity Switches

(8) Without Encoder

Notes: (1) The above part number defines a standard catalogue unit. Where a standard unit does not meet the customer's requirement, Power Jacks will be pleased to design a special unit.

4. Rolaram® Linear Actuator Range

There are 8 standard Rolaram models, available in 2 standard drive configurations, each with 10 linear speeds and offering a wide range of load capabilities. The R050, R075, R100 and R125 models are available in a Ball Screw version, for applications where positional accuracy is less important and a more cost effective solution is desired.

Where the standard range does not meet the application specification, special actuators can be designed to meet customers' specific requirements (refer page 9).

Dynamic Load Capacity and Linear Speed

Dynamic load capacity from 4 kN to 400 kN (0.4 to 40 tonnes). A wide choice of linear speeds is available, from less than 250 mm/minute to 7000 mm/minute. The speed range is achieved by using a combination of gearbox ratios, screw leads and standard motor speeds. The load/speed curves below illustrate by model how the dynamic load capacity varies with linear speed.

Load/Speed Curves

Drive

The drive is a standard 415v 3ph AC brake motor, mounted either at right angles or parallel to the actuator ram. The motor is fitted with a brake as standard, to insure that despite the high efficiency screw and gear system, the actuator is self sustaining and will not back drive. High efficiency helical spur and spiral bevel gearing are used to achieve the choice of reduction ratios and the option of a right angle or parallel drive.

Stroke

Each model can be provided with a stroke length up to the maximum shown in the Technical Charts. Please note that these strokes allow for the maximum dynamic load in compression. For a tensile load, greater maximum strokes can be accommodated depending on the linear speed. Where the stroke required exceeds the maximum shown, or there is a high static load, please contact our Technical Sales Department.

Standard Features

- Right angle or parallel drive configurations
- Choice of end fittings - clevis, screwed end, top plate
- Trunnion mounting (with or without feet)
- Rear Clevis
- Proximity switches, encoder
- Ball screw version for R075, R100 and R125 models
- Guided ram

Operating Life and Duty

The actuator models listed in the Technical Charts are capable of very high operating lives (in excess of 10,000 hours for some high speed models). The ball screw version may have a lower life expectancy than the equivalent roller screw version. Due to the almost limitless number of possible configurations, please consult our Technical Sales Department for an estimate of life for individual applications. Continuous duty applications e.g. reciprocating pumping systems can also be realised.

Efficiency

The inherent high efficiency of the screw and helical spur and spiral bevel gear system combine to give an overall mechanical efficiency of typically 80%. Power consumption is therefore minimised and a compact actuator is assured.

Synchronisation

Synchronisation of two or more Rolaram actuators can be achieved in one of two ways, depending on the requirements of the application:

- Using encoders, synchronous motors or servo systems (i.e. each unit motorised)
- By linking the units mechanically with drive shafting, driven by one common motor

Positional Accuracy

The inherent accuracy of the roller screw and low backlash gearing provide repeatable positioning to within 0.005mm (5 microns), when the actuator is combined with a suitable drive and control system. Ball screw models have a positional accuracy of 50 microns.

Guiding the Load

Side loads on the actuator ram should be avoided by ensuring that the load is guided. The load guide mechanism should resist the torque developed at the ram by the screw mechanism, thus precluding the use of spherical end fittings. The guided ram option, which utilises rolling element followers, eliminates the need for torsional restraint and therefore allows flexibility in the choice of end fittings.

Mounting Position

The Rolaram actuator can be mounted for operation in any orientation.

Safety Features

- In the event of power failure, the fail-safe brake on the motor will maintain the position of the actuator
- Totally enclosed and sealed unit
- Built in proximity switches/limit switches
- Guided ram version

Operating Environment

All units are constructed and finished to suit industrial operating conditions. The actuator is sealed at the ram and including the standard brake motor is protected to IP55 enclosure. Normal operating temperatures are from -10°C to +50°C. However, Power Jacks products have been proven in very low operating temperatures (-30°C- Arctic) and in very high temperatures (+70°C- steelworks). Please contact our Technical Sales Department to discuss hostile or hazardous operating environments.

Lubrication and Maintenance

Rolaram actuators require only a minimum of maintenance during the normal operating life. Depending upon the duty, periodic lubrication should be carried out on the Spiracon roller nut, thrust housing and helical spur/spiral bevel gearbox, according to the application and our recommended maintenance instructions.

Specials

The Rolaram concept has been successfully applied in many varied "special" applications, requiring for example:

- Very high linear speed (over 50 metres/minute) or acceleration (over 3 metres/sec²)
- Very high dynamic load (over 1000kN)
- In-line drive configuration
- Special drive e.g. inverter, servo, DC, stepper
- Temperature extremes or hazardous environment (e.g. subsea)
- Built in load cell
- Special mounting or restricted space
- Very low noise (under 60dB)

5. How to Select a Rolaram® Actuator

There are 4 simple steps as follows :

Step 1

Using the load/speed curves on page 8, select the actuator model which has an adequate dynamic load capacity for the required linear speed. Positional accuracy and life considerations may dictate selection of the roller screw version for models R075, R100 and R125.

Step 2

Referring to the Technical Charts (page 11) for that model, select the nearest linear speed for the chosen right angle or parallel drive configuration.

Ball Screw

Product Code	Linear Speed (mm/min)	Dynamic Load Capacity (kN)
B0500260	260	13
B0500440	440	11
B0500550	550	10
B0500700	700	9.5
B0501080	1080	8
B0501560	1560	7
B0502150	2150	6.5

Step 3

Check the required stroke is within the maximum stroke limit.

Frame Size	Max Stroke (mm) in Compression ☺	Basic Weight (kg)
63	835	4.2
63	930	4.6
63	990	4.8
80	1025	4.9
80	1140	5.2

Step 4

Choose the end fitting, mounting arrangement and other options required to complete the full product code shown on page 7.

Example

Dynamic Load = 50 kN (in compression)
 Linear Speed = 900 mm/minute Stroke= 1500 mm
 Parallel drive configuration, unguided ram, fitted with a clevis end, trunnion mounting (without feet) and proximity switches.

Step 1

Using load/speed curves on page 8, select model R125.

Step 2

Referring to Technical Chart for Model R125-Parallel Configuration on page 11, select product code R1251040.

Step 3

The required stroke of 1500 mm is less than the maximum shown (1600 mm).

Step 4

The complete product code is therefore **R1251040-P-P-1500-C-TN-P-0**

6. Rolaram® Performance Data

General Rolaram Performance Summary

Load	Up to 400 kN (40 Te)	
Linear Speed	Up to 7000 mm/min	
Stroke	Up to 5000 mm	
Efficiency	80% (typical)	
Accuracy	Roller Screw	Up to within 0.005 mm (5 micron)
	Ball Screw	Up to within 0.05 mm (50 micron)
Operating Temperature	Normal	-10o C → +50o C
	Extreme (consult Power Jacks)	-30o C → +70o C
Life	10 000 hours typical as standard at full rated load and speed	
Enclosure	IP55	

Model B050/R050

Parallel Configuration

Ball Screw

LINEAR ACTUATORS | Rolaram

Rolaram® - Parallel Motor Configuration - Rear Clevis Mount

Rolaram with rear clevis mounting enables the actuator to be configured for double clevis arrangements. Details below are for the B050 Rolaram Actuator only. For all other sizes contact Power Jacks.

B050 - Rolaram®

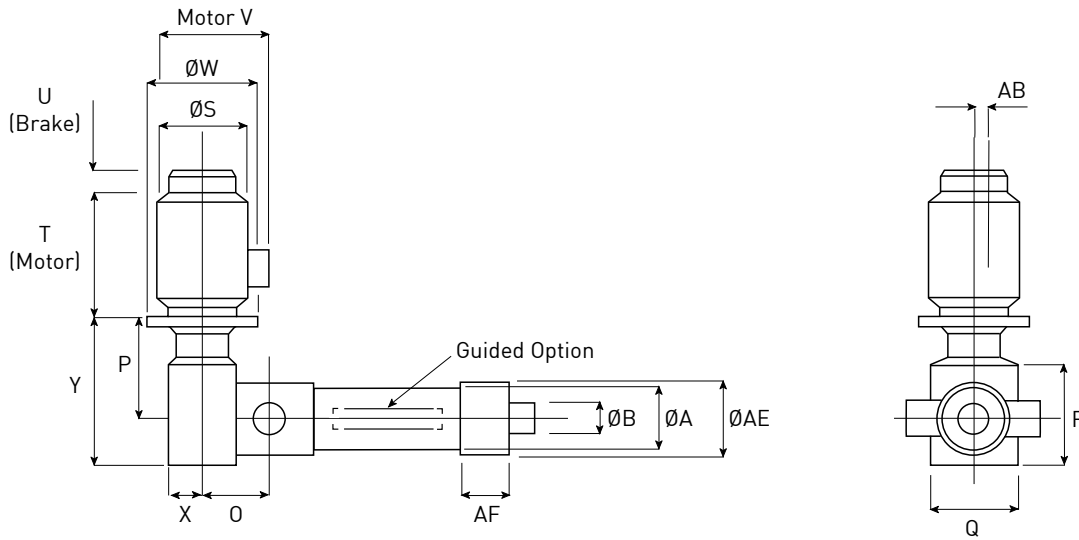

Standard Clevis, Top Plate and Threaded Ends are available on request.

8. Rolaram® Accessories and Options

Limit Switches

Standard Rolaram® Actuator Limit Switch

- Inductive proximity switches
- Cylindrical design M18 x 1
- Standard housing made from brass or stainless steel.
- DC-voltage
- Sizes: A = 60 mm, B = 51.5 mm

Rolaram® Limit Switch Technical Data

Parameter	Data
Type	Four-wire PNP/NPN/NO/NC programmable
Housing Material	Brass housing
Nominal Sensing Distance, S_n	5mm
Weight (kg)	0.120
Connecting Cable	4 core x 0.34mm ² , 2m long (other lengths available on request)
Degree of Protection	IP 68
Sensing Distance, S_r	0 → 4mm
Repeat Accuracy, R	3% of S_r
Differential Travel, H	1 15% of S_r
Operating Temperature	-25 → + 80°C
Output State Indicator	LED
Voltage, U_o	12 → 24VDC
Operating Voltage, U_b (including residual ripple)	10 → 38VDC
Switching power, I	0 → 200mA, including overload and short circuit connection
Voltage Drop, U_d (output controlled)	2.6V
Residual Current, I_r (output locked)	-
Idle Current, I_a	10mA
Maximum Switching Frequency, f	2000Hz
Delay Times	Stand-by delay t_v = 5ms, switch-on time t_{on} = 1.15ms, switch-off time t_{off} = 0.35ms

Optional Rolaram® Actuator Limit Switch

Other limit switches can be supplied to suit most applications e.g:

- Different sizes, shape, design and enclosure electro-mechanical limit switches
- Inductive proximity sensor
- Hazardous Area rated electro-mechanical limit switch
- High or low temperature rated limit switches or sensors. For all of these options consult Power Jacks for details

Encoders for Rolaram® Actuators

Encoders for Rolaram linear actuators can be provided fitted to the rear of the electric motor (beneath the cowling). For further details please consult Power Jacks.

Optional Materials for Rolaram® Actuator Construction

As with all other Power Jacks products these actuators can be manufactured with alternative materials to meet the most demanding application. Consult Power Jacks for advice.

9. Special Rolaram® Designs and Applications

Actuator

R150 model, roller screw version, in-line drive.

Application

Driving reciprocating, double acting paint pumps in the first all-electric paint mix facility in Europe.

Linear Actuation Requirements

The dynamic load is 17.9 kN in both directions, at a linear speed of 3 metres/minute

and a continuous duty cycle of 24 hours/day, 365 days/year. Each pump delivers 40 litres of paint/minute at 12 bar, 12 cycles/minute. The paint shop output is 30 cars/hour

(Phase 1) and 60 cars/hour (Phase 2).

Solution

Each pump is driven by a special R150 Rolaram actuator and a total of 31 actuator and pump systems are installed.

The actuator's features are:

- In-line configuration, minimizing the installation footprint
- Completely sealed unit, ensuring no contamination of the pumped medium
- Intrinsically safe, eliminating explosion risk
- Fitted with a keyed screw mechanism

An electro mechanical solution was preferred to pneumatics/hydraulics due to significantly reduced running costs, high life and reliability, high efficiency, low maintenance, low paint degradation and quiet operation.

Actuator

B100 model, ball screw version, parallel drive.

Application

Full body, multi purpose X ray examination table.

Linear Actuation Requirements

The dynamic load is 65 kN and high positional accuracy is required to achieve a defined axial play of the ram. Due to the clinical environment, the ability to tilt and elevate at the same time is unique and no other table on the marketplace is available with this feature. Operating in a medical environment, a major requirement of the actuators is low noise and the units cannot exceed 60 dB.

Solution

Two B100 ball screw Rolaram actuators, both parallel drive configurations, are fitted on each X ray table and they are synchronized for horizontal and vertical positioning through a complex servo control system. The actuators are tested to withstand 8 times the maximum load, without catastrophic failure. Due to space constraints, they are of a compact design and conform to strict aesthetic criteria.

Actuator

Spring return actuator, ball screw version, in-line drive.

Application

Failsafe operation of ventilation dampers.

Linear Actuation Requirements

The actuator opens and closes the damper and maintains a 3 kN load to ensure that the damper is sealed. The damper must open and close in 2 seconds and operate at 250°C for 1 hour. In the event of power failure, the actuator must failsafe in the closed position.

**Solution**

One off ball screw actuator is fitted onto each damper. The actuator contains a pre-loaded spring and is fitted with a high temperature brake motor. The internal spring and drive configuration will allow the ram to retract automatically in the event of power failure. Three adjustable limit switch positions are provided and the stroke can be set within the allowable 120 mm, by adjusting these switches. All components are selected for the appropriate approved temperature requirement. The actuator has a fire test certificate for operation at 250°C for 1 hour.

**Actuator**

R175 model, roller screw version, right angle drive.

Application

Positioning a weir gate for water level adjustment.

Linear Actuation Requirements

The actuator moves a dynamic load of 150 kN (static load of 330 kN), at a linear speed of 240 mm/minute, has a stroke of 2700 mm and a life requirement of 40 years.

Solution

One actuator is fitted on each weir gate and has several special features:

- Universal joint at the ram end to compensate for misalignment and to resist the load torque
- Geared motor drive with hand wind facility
- Positional indication and end of travel limit switches
- Non contaminating grease

This application is in a remote location and an electro mechanical solution was preferred over hydraulics due to low power requirements, no expensive hydraulic power pack, no hydraulic fluid leakage i.e. no water contamination and minimal maintenance.
